Tafara Rugara

Automation Engineer

AI Workflows | CRM Automation | API Integration

Harare, Zimbabwe (UTC+2) | Remote contracts: Zimbabwe, South Africa and international teams

tfrsuperfx@gmail.com | +263 777 553 271 | tafara.netlify.app

github.com/98Devops | linkedin.com/in/tafara-rugara-0627b819b

PROFESSIONAL SUMMARY

Automation engineer building business workflows with n8n, GoHighLevel, Zapier, JavaScript and APIs. Experience repairing CRM lifecycle automation, integrating AI services and deploying Docker-based systems. Replaced four spreadsheets with a live property system for 130+ tenants. Delivers tested workflows, root cause analysis and clear documentation for remote clients.

TECHNICAL SKILLS

Automation and integration: n8n, GoHighLevel (GHL), Zapier, REST APIs, JSON, conditional routing, CRM pipelines, lifecycle workflows, process automation

Programming and data: JavaScript, TypeScript, Python, Bash, Node.js, Flask, PostgreSQL, Supabase, SQL, Qdrant

AI and delivery: LLM integration, Gemini, Whisper API, prompt engineering, structured output validation, Docker, Docker Compose, Linux, AWS, DigitalOcean, GitHub Actions CI/CD

Quality and reliability: Workflow QA, error handling, root cause analysis, data integrity checks, Vitest, Jest, Supertest, Git, technical documentation

PROFESSIONAL EXPERIENCE

AI Automations & Systems Operator | Clear Elevation

May 2026 - Present | Remote | International clients

- Build and maintain GoHighLevel automation workflows, CRM architecture, funnels and email campaigns for an international marketing agency.
- Diagnosed a patient-retention routing failure across Practice Better, GoHighLevel and Zapier that processed only one patient type and silently dropped others.
- Fixed 7 triggers and published 3 lifecycle workflows for engagement tracking, at-risk reactivation and dormant reactivation, plus refill reminders and pipeline automation.
- Test triggers, forms, payments, domains and workflow exits before handover; write system prompts and implementation briefs.

Web & Systems Developer | Mero Tech

December 2025 - April 2026 | Harare, Zimbabwe | Self-employed

- Delivered Trevis, a React and Supabase property-management system replacing 4 spreadsheets for 130+ tenants across 4 properties.
- Implemented ledger-derived rent coverage, automated nightly integrity checks and daily owner reporting; supported the system with approximately 190 Vitest tests.
- Shipped mining and HVAC client websites using Next.js, React and Vite, external APIs and Netlify deployment.

DevOps Engineer | Excellessence (YourEKA Services)

June 2025 - October 2025 | Harare, Zimbabwe | Hybrid

- Built and deployed an AI workflow pipeline with APIs, background jobs and a secure multi-container environment.
- Replaced low-code nodes with custom JavaScript and enforced strict JSON schemas for consistent downstream processing.

SELECTED AUTOMATION PROJECTS

Delivery Health and Operations Intelligence | n8n, JavaScript, Gemini, ClickUp

Built a 27-node pilot with task normalization, AI response validation, ClickUp updates, aggregated email alerts and manual-review routing. Published the workflow and architecture documentation.
