SUMMARY

Full-stack developer who ships real products — from high-performance marketing sites to production web applications running on live business data. I build with React, Next.js and modern tooling, back it with Postgres and secure auth, and obsess over performance, clarity and conversion. I turned four messy spreadsheets into one trusted live dashboard serving **130+ tenants**, write tested code (**≈190 unit tests** on my flagship app) and deploy on CI/CD pipelines that don't break on Friday.

PROFESSIONAL EXPERIENCE

Web & Systems Developer — Mero Tech
Dec 2025 – Apr 2026
Harare, Zimbabwe · Self-employed

- Built and shipped production websites and web applications for real clients across mining, HVAC and property sectors — design, copy, build and deploy.
- Delivered **Trevis**, a live React + Supabase property-management system that replaced **4 spreadsheets** with one source of truth for **130+ tenants across 4 properties** — backed by **≈190 unit tests** and automated nightly data-integrity checks.
- Built **Litho Solutions** (Next.js 15 / React 19) with interactive Three.js 3D visualizations, and **ProAir Zimbabwe** (Vite) with WhatsApp-first lead generation and a live weather API — both deployed as performant static exports.

AI Automations & Systems Operator — Clear Elevation
May 2026 – Present
Remote · International clients

- Build and maintain client backend systems for an international marketing agency — automation workflows, CRM architecture, funnels, landing pages and email campaigns inside GoHighLevel — so clients operate like CEOs, not operators.
- Rescued a failing patient-retention system spanning Practice Better (EMR), GoHighLevel and Zapier: root-caused a router that only handled one patient type while silently dropping the rest, then fixed **7 triggers** and published **3 new lifecycle workflows** (engagement tracking, at-risk reactivation, dormant reactivation) plus refill reminders and pipeline automation.
- Author comprehensive system prompts and briefing materials to run parallel AI agents consistently across builds.
- QA standard: every trigger, form, payment, domain and workflow exit tested before delivery — never assumed, always verified.

DevOps Engineer — Excellessence (YourEKA Services)
Jun 2025 – Oct 2025
Harare, Zimbabwe · Hybrid

- Built and deployed a production AI workflow pipeline with APIs, background jobs and a secure multi-container environment.
- Improved reliability by replacing low-code nodes with custom JavaScript and enforcing strict JSON schemas for consistent downstream behaviour.

FEATURED PROJECTS

Trevis — Property Management System *React · Vite · Supabase · Postgres · RLS · Vitest*
From four spreadsheets to one source of truth — a live system tracking **130+ student tenants** across 4 properties, self-auditing nightly. Day-based rent-coverage engine replayed from an immutable ledger; Supabase Auth + Row-Level Security, role-based Admin/Manager, 1-click CSV export, automated daily owner report.
github.com/98Devops/trevis-app

Litho Solutions *Next.js 15 · React 19 · Tailwind v4 · Three.js · Framer Motion*
Web platform for modernizing mineral exploration — decision-ready data visualization to prevent blind drilling. Interactive 3D visualizations with React Three Fiber, Framer Motion transitions, performant static export.
litho-solution.netlify.app · github.com/98Devops/Litho-Solutions

ProAir Zimbabwe *Vite 5 · HTML5 · CSS3 · Vanilla JS*
High-performance site for a leading air-conditioning specialist, built around WhatsApp-first lead generation. Live weather widget (Open-Meteo API), particle-system background, 3D tilt-card interactions, Sharp image optimization.
proairzw.netlify.app · github.com/98Devops/ProAir-Zimbabwe-

Acquisitions API — SaaS M&A Platform *Node · Postgres · Docker · Kubernetes*
Production API with JWT auth, RBAC, deal-workflow state machine, validation and structured logging. Published as a public Docker image.
github.com/98Devops/acqusitions · Docker: `devops263/acquisitions-api:latest`

CORE SKILLS

FRONTEND
React 19 · Next.js 15 · Vite · Tailwind v4 · Framer Motion · Three.js / R3F · Responsive design

BACKEND & DATA
Node.js · REST APIs · Supabase / Postgres · Row-Level Security · Neon + Drizzle · Flask (Python)

ENGINEERING PRACTICE
Vitest / Jest / Supertest · ESLint + Prettier · Git & code review · JWT + RBAC

PERFORMANCE & DELIVERY
Static export · Sharp image optimization · CDN delivery · GitHub Actions CI/CD · Netlify

ALSO
Docker · AWS · n8n automation

CERTIFICATIONS

AWS Certified Cloud Practitioner
2024

AWS Solutions Architect – Associate
In progress

EDUCATION

Self-taught Engineer
Project-driven learning across web, cloud and AI; builds documented publicly on YouTube (Tech With Tafara).

HIGHLIGHTS

- **130+** tenants managed on Trevis
- **≈190** unit tests on flagship app
- **4** spreadsheets replaced by one system
- **3** live client sites shipped & deployed
